EL PROYECTO / INTRODUCCIÓN

- Somos una comunidad diferente

- Nuestros temas de conversación son distintos.

- Necesitamos un espacio que nos una como carrera y nos permita conectarnos como personas.

OBJETIVOS

- Implementar las herramientas aprendidas en clase.

- Complementar la idea de la página Web.

- Profundizar nuestros conocimientos de AndroidStudio.

ACTIVITIES

REGISTRATION ACTIVITY

```
import com.google.android.gms.tasks.OnCompleteListener;
import com.google.android.gms.tasks.Task;
import com.google.firebase.auth.AuthResult;
import com.google.firebase.auth.FirebaseAuth;
public class RegistationActivity extends AppCompatActivity {
    private EditText Username, Password, Email;
    private TextView GotoLog;
    private Button Register;
    private FirebaseAuth firebaseAuth:
    @Override
   protected void onCreate(Bundle savedInstanceState) { //First thing that runs when creating the APP
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity registation);
        setUpUIViews():
        firebaseAuth = FirebaseAuth.getInstance();
       Register.setOnClickListener((v) → {
                if(validate()){
                    String user email = Email.getText().toString().trim(); //Trim removes all white spaces that the user might have enter.
                    String user password = Password.getText().toString().trim();
                    firebaseAuth.createUserWithEmailAndPassword(user email,user password).addOnCompleteListener((task) - {
                            if(task.isSuccessful()){
                                Toast.makeText( context: RegistationActivity.this, text: "Te has registrado!", Toast.LENGTH SHORT).show();
                                startActivity(new Intent( packageContext: ReqistationActivity.this,MainActivity.class));
                            else{
                                Toast.makeText( context: RegistationActivity.this, text: "Error!", Toast.LENGTH SHORT).show();
                    });
                    //Upload data to the database
                } //Valida si los usuarios han ingresado los datos correctos.
        });
```

```
GotoLog.setOnClickListener((v) → {
            startActivity(new Intent( packageContext RegistationActivity.this, MainActivity.class));
   });

    private Button LogIn;
    private TextView GoReg;
    private int contador = 0;
    private FirebaseAuth firebaseAuth; //Import libraries of the authentication
    private ProgressDialog progressDialog;
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity main);
        Name = findViewById(R.id.userLoginActivity);
        Password = findViewById(R.id.passLoginActivity);
        Info = findViewBvId(R.id.attLoginActivity);
        LogIn = findViewById(R.id.btnLoginActivity);
        GoReq =findViewById(R.id.regTVLogActivity);
        firebaseAuth = FirebaseAuth.getInstance();
        progressDialog = new ProgressDialog( context: this);
        FirebaseUser user = firebaseAuth.getCurrentUser(); // Checks if a user has already log in
        if(user != null){ //Checks if a user is already logged in
            finish();
            startActivity(new Intent( packageContext: MainActivity.this, SecondActivity.class));
        LogIn.setOnClickListener((v) → {
                Validate(Name.getText().toString(), Password.getText().toString()); // VALIDA
        1):
```

```
GoReg.setOnClickListener((v) → {
            startActivity(new Intent( packageContext: MainActivity.this.RegistationActivity.class));
    });
private void Validate(String userName, String userPass){
    progressDialog.setMessage("Estamos verificando tu cuenta.");
    progressDialog.show();
    firebaseAuth.signInWithEmailAndPassword(userName, userPass).addOnCompleteListener((task) -> {
            if(task.isSuccessful()){
                progressDialog.dismiss();
                Toast.makeText( context: MainActivity.this, text: "Exito!", Toast.LENGTH SHORT).show();
                startActivity(new Intent( packageContext: MainActivity.this, SecondActivity.class));
            }else{
                Toast.makeText( context: MainActivity.this, text: "Error!", Toast.LENGTH SHORT).show();
                contador++;
                progressDialog.dismiss();
                Info.setText("Numero de intentos: " + contador);
                if(contador == 5){
                    LogIn.setEnabled(false);
```

INTENTS

- De Registration a Main Activity.

De Main Activity a Second Activity (Lista de opciones).

- De Second Activity a todos las herramientas del APP.

ACTIVITY _MAIN

FIREBASE

- Firebase getinstance
- Firebase createuserwithemailandPassword
- Firebase Task
- Firebase getUid
- Firebase database getreference

CONCLUSIONES Y APRENDIZAJES

- La herramienta Firebase permite enfocarnos en el desarrollo del App.
- El proyecto nos ha permitido utilizar conocimientos de programación (backend) aprendidos hasta ahora.
- Se utilizó Intents para ir entre layouts y para dirigirnos a otras URLS.
- Se utilizaron las bibliotecas de FireBase.
- Se han desarrollado 6 Activities y 7
